Inventory system for medication

Prescription status

ABOUT MED-DOC

- This is an app developed for to help patients keep track of their medical history and status
- It is also meant to help with prescription refills for patients
- To help Doctors with patient management system
- Help doctors keep track of available medication and prescriptions
- Help doctors keep track of appointments

HOW EVERYTHING WORKS

With Medic-Doc

MORE ABOUT APP

1. MedScript Nerds had and executed an idea to solve this modern-day problem by developing a mobile app meant to be used by patients and a web-based application meant for a medical doctor.
2. Both apps work in collaboration by sharing necessary data aligned with user needs.
3. For every Patient a QR code is provided for Scanning in order to download App

LIMITATIONS OF MED-DOC DEVELOPMENT

- With a slightly more time my team would have develop a fa much better system than we have. Mind you, we just need to work on our time management skills

MED-SCRIPT NERDS IS GRATEFUL FOR

- We are very grateful to be part of this life changing opportunity to develop our programming skills
- This was a very educational experience, and we cannot wait to implement the skill we have learned in the past 48 hours

THANK YOU
